## Flyaway

### **Does your business keep you constantly on the move? Take the Internet with you.**

The flyaway mobile satellite system is a two-case solution that can be easily transported in a pickup truck or shipped via common carrier.

Deploying a flyaway is easy. Remove the top cover from the Antenna Box, connect 4 color coded cables between the Electronics Box and the Antenna, add power, and hit the "find satellite" button. That's all there is to it. Within 10 minutes of arriving on site, even minimally trained personnel can establish a high speed, business grade Internet connection or wireless hot-spot.

#### **.75m Flyaway Antenna**

- Rugged blow-molded case
